

Fill the lambda so that it prints the number and its **square**.

For example:

Input	Result
5	525

Answer: (penalty regime: 0 %)

Language

Reset answer

```
1 import java.util.*;
2
3 interface Display {
4     void show(int x);
5 }
6
7 public class Main {
8     public static void main(String[] args) {
9         Scanner sc = new Scanner(System.in);
10        int n = sc.nextInt();
11        Display d = x -> System.out.println("" + x + (x * x));
12        d.show(n);
13    }
14 }
15
```

	Input	Expected	Got	
✓	5	525	525	✓

Passed all tests! ✓

Correct

Marks for this submission: 2/2.

Complete the lambda expression so that the program prints **Hello Lambda**.

For example:

Input	Result
1	Hello Lambda

Answer: (penalty regime: 0 %)

Language

Reset answer

```
1 interface Message {  
2     void show();  
3 }  
4  
5 public class Main {  
6     public static void main(String[] args) {  
7         Message m = ()-> System.out.println("Hello Lambda");  
8         m.show();  
9     }  
10 }  
11
```

	Input	Expected	Got	
✓	1	Hello Lambda	Hello Lambda	✓

Passed all tests! ✓

Correct

Marks for this submission: 2/2.

Fill in the lambda expression to print **double the number** passed.

For example:

Input	Result
3	6

Answer: (penalty regime: 0 %)

Language

Reset answer

```
1 import java.util.*;
2
3 interface Operation {
4     void compute(int x);
5 }
6
7 public class Main {
8     public static void main(String[] args) {
9         Scanner sc = new Scanner(System.in);
10        int n = sc.nextInt();
11        Operation op = x -> System.out.println(""+x*2);
12        op.compute(n);
13    }
14 }
15
```

	Input	Expected	Got	
✓	3	6	6	✓

Passed all tests! ✓

Correct

Marks for this submission: 2/2.

Complete the lambda expression so that it returns the **sum of two numbers**.

For example:

Input	Result
4	8

Answer: (penalty regime: 0 %)

Language

Reset answer

```
1 import java.util.*;
2
3 interface Calculator {
4     int add(int a, int b);
5 }
6
7 public class Main {
8     public static void main(String[] args) {
9         Scanner sc = new Scanner(System.in);
10        int n = sc.nextInt();
11        Calculator c = (a,b)-> a+b;
12        System.out.print(c.add(n, 4));
13    }
14 }
15
```

	Input	Expected	Got	
✓	4	8	8	✓

Passed all tests! ✓

Correct

Marks for this submission: 2/2.

Write a Java program that uses a **lambda expression** to calculate the **square of a given integer**.

Requirements

1. Define a **functional interface** with a method that accepts an integer parameter named **x**.
2. Implement the interface using a **lambda expression**.
3. Read an integer from standard input.
4. Print the square of the number.

⚠ **The variable name inside the lambda must be **x**.**

Answer: (penalty regime: 0 %)

```
1 import java.util.Scanner;
2
3 interface SquareCalculator{
4     int calculate(int x);
5 }
6
7 public class Main{
8     public static void main(String[] args){
9         Scanner sc = new Scanner(System.in);
10
11         SquareCalculator square = (x)->x*x;
12
13         if(sc.hasNextInt()){
14             int input = sc.nextInt();
15
16             int result = square.calculate(input);
17             System.out.println(result);
18         }
19         sc.close();
20     }
21 }
```

	Input	Expected	Got	
✓	7	49	49	✓

Passed all tests! ✓
