

Write a program to convert an integer to binary and then find the number of ones in it using bit count.

For example:

Input	Result
590	1001001110 5
652	1010001100 4

Answer: (penalty regime: 0 %)

```
1 import java.util.*;
2
3 public class Demo{
4     public static void main(String[] args){
5         Scanner sc = new Scanner(System.in);
6
7         if(sc.hasNext()){
8             int number = sc.nextInt();
9
10            String binary = Integer.toBinaryString(number);
11
12            int count = Integer.bitCount(number);
13
14            System.out.println(binary);
15            System.out.println(count);
16        }
17    }
18 }
```

	Input	Expected	Got	
✓	590	1001001110 5	1001001110 5	✓
✓	652	1010001100 4	1010001100 4	✓

Correct

Marks for this submission: 10/10.

Write a program IntWrapper that uses the constants and methods of the Float and Integer class to perform the following tasks.

1. Print the maximum and minimum possible Java float values. Use the constants in the Float class that hold these values – don't type in the numbers themselves. Note that these constants are static.
2. Prompt the user to enter two integers, one per line. Use the next method of the Scanner class to read each of them in. (The next method returns a String so you need to store the values read in String variables) Now convert the strings to ints (use the appropriate method of the Integer class to do this), add them together, and print the sum.

For example:

Input	Result
36 45	Float Min: 1.4E-45 Float Max: 3.4028235E38 Sum is: 3645

Answer: (penalty regime: 0 %)

```
1 import java.util.*;
2
3 public class IntWrapper{
4     public static void main(String[] args){
5         System.out.println("Float Min: "+Float.MIN_VALUE);
6         System.out.println("Float Max: "+Float.MAX_VALUE);
7
8         Scanner sc = new Scanner(System.in);
9         if(sc.hasNext()){
10             String str1 = sc.next();
11             String str2 = sc.next();
12
13             int num1 = Integer.parseInt(str1);
14             int num2 = Integer.parseInt(str2);
15
16             int sum = num1 + num2;
17             System.out.print("Sum is: "+num1+num2);
18
19         }
20
21     }
22 }
23 }
```

	Input	Expected	Got	
✓	36 45	Float Min: 1.4E-45 Float Max: 3.4028235E38 Sum is: 3645	Float Min: 1.4E-45 Float Max: 3.4028235E38 Sum is: 3645	✓
✓	65 74	Float Min: 1.4E-45 Float Max: 3.4028235E38 Sum is: 6574	Float Min: 1.4E-45 Float Max: 3.4028235E38 Sum is: 6574	✓
